Inspect

Make sure it says webpage. We want it to be an html file so save it as a webpage.

File name:

yeezy foam runner for sale_eBay

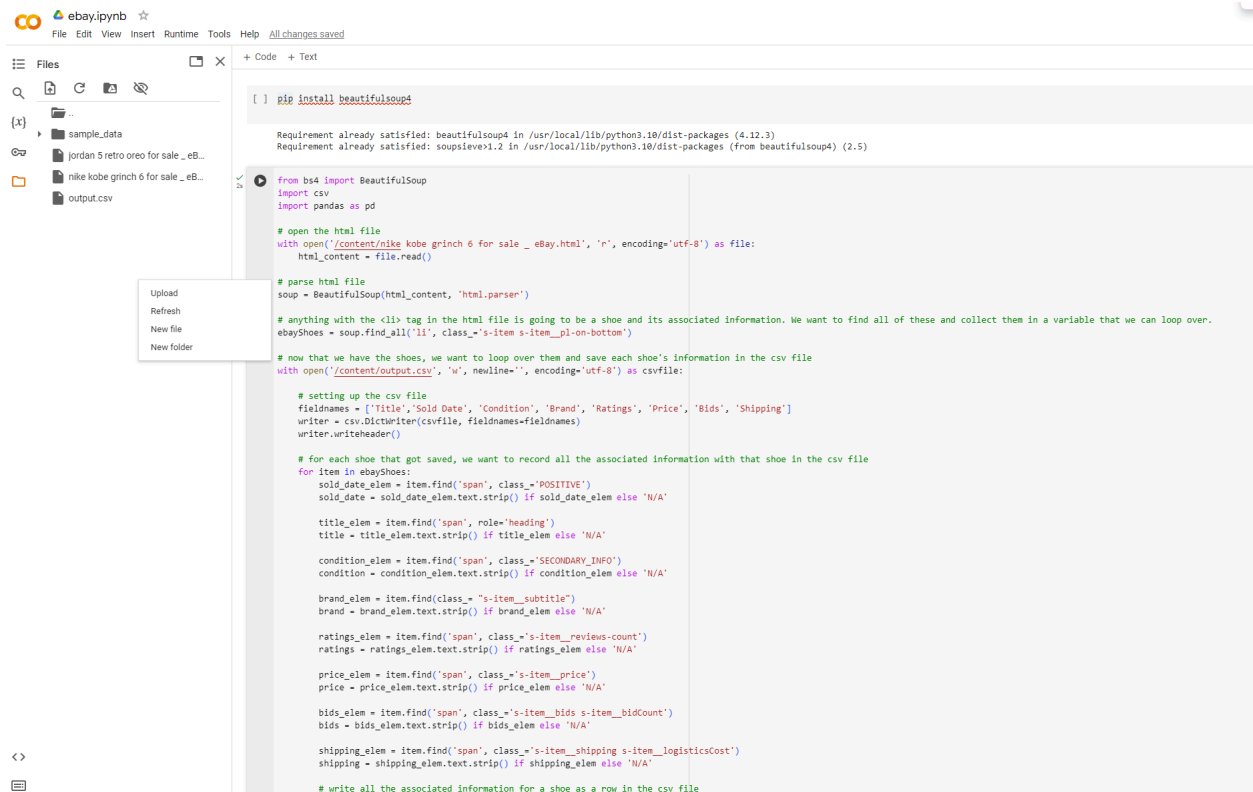

Save as type:

Webpage, Complete

Step 4.

Open the ebay.ipynb file

Step 5.

```
[ ] pip install beautifulsoup4

Requirement already satisfied: beautifulsoup4 in /usr/local/lib/python3.10/dist-packages (4.12.3)
Requirement already satisfied: soupsieve>1.2 in /usr/local/lib/python3.10/dist-packages (from beautifulsoup4) (2.5)

from bs4 import BeautifulSoup
import csv
import pandas as pd

# open the html file
with open('/content/nike kobe grinch 6 for sale _ eBay.html', 'r', encoding='utf-8') as file:
    html_content = file.read()

# parse html file
soup = BeautifulSoup(html_content, 'html.parser')

# anything with the <li> tag in the html file is going to be a shoe and its associated information. We want to find all of these and collect them in a variable that we can loop over.
eBayShoes = soup.find_all('li', class_='s-item s-item_pl-on-bottom')

# now that we have the shoes, we want to loop over them and save each shoe's information in the csv file
with open('/content/output.csv', 'w', newline='', encoding='utf-8') as csvfile:

    # setting up the csv file
    fieldnames = ['Title', 'Sold Date', 'Condition', 'Brand', 'Ratings', 'Price', 'Bids', 'Shipping']
    writer = csv.DictWriter(csvfile, fieldnames=fieldnames)
    writer.writeheader()

    # for each shoe that got saved, we want to record all the associated information with that shoe in the csv file
    for item in eBayShoes:
        sold_date_elem = item.find('span', class_='POSITIVE')
        sold_date = sold_date_elem.text.strip() if sold_date_elem else 'N/A'

        title_elem = item.find('span', role='heading')
        title = title_elem.text.strip() if title_elem else 'N/A'

        condition_elem = item.find('span', class_='SECONDARY_INFO')
        condition = condition_elem.text.strip() if condition_elem else 'N/A'

        brand_elem = item.find(class_='s-item_subtitle')
        brand = brand_elem.text.strip() if brand_elem else 'N/A'

        ratings_elem = item.find('span', class_='s-item_reviews-count')
        ratings = ratings_elem.text.strip() if ratings_elem else 'N/A'

        price_elem = item.find('span', class_='s-item_price')
        price = price_elem.text.strip() if price_elem else 'N/A'

        bids_elem = item.find('span', class_='s-item_bids s-item_bidCount')
        bids = bids_elem.text.strip() if bids_elem else 'N/A'

        shipping_elem = item.find('span', class_='s-item_shipping s-item_logisticsCost')
        shipping = shipping_elem.text.strip() if shipping_elem else 'N/A'

        # write all the associated information for a shoe as a row in the csv file
```

On the left hand side, you want to right click in the whitespace in the files section and click upload

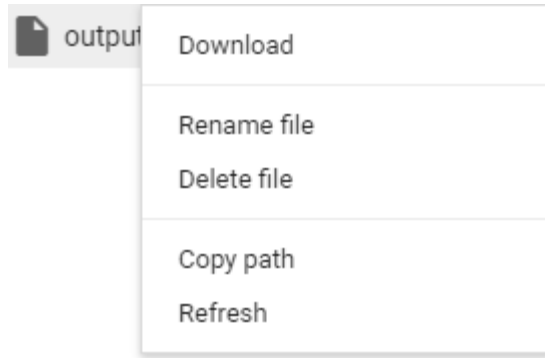

Step 6.

Upload the html file you saved from ebay in step 4

Step 7.

```
# open the html file
with open('/content/nike kobe grinch 6 for sale _ eBay.html', 'r',
encoding='utf-8') as file:
    html_content = file.read()
```

In this code, change the `/content/nike kobe grinch 6 for sale _ eBay.html` To whatever the path is. You can find the path by hovering over the file in the left panel, and clicking the three dots and clicking copy path

Step 8. Run the code cells and voila

If this was confusing or hard to read, just text me and I can try to be more specific.
